

Sample uses.....

- Attaching check sockets to block or alignment fixtures
- Repairing cracks in check sockets
- Sealing a seam on a drape-formed check socket
- Building up the outside of check sockets or existing sockets when a relief would cut through the socket wall
- Repairing a cracked composite socket utilizing carbon or fiberglass using the glue as a matrix
- Repairing a broken plaster cast
- CAD foam applications
- Building up a popliteal trim line on a BK for diagnostic fitting
- Creating flares on check sockets or socket trim lines
- Attaching side joints to check sockets or first lamination for a side joint and thigh lacer BK
- Attaching many styles of ankle and knee joints for fabrication
- Attaching a terminal device to an upper extremity check socket for trial
- Any application that requires the use of traditional acrylics or "gunk"

Features.....

- 25, 60 and 90 second product choices to fit your needs
- 50ml and 220ml cartridge sizes
- Easy to remove twist off top (50ml size)
- Quick leverage top (220ml size)
- 220ml threaded tips that eliminate tip blow outs
- Convenient & portable
- No need to store the product in special chemical cabinets in far away rooms
- Extremely resistant to moisture
- Two-year shelf life
- Non-Sagging formula
- Non-compressive and machineable making it extremely tough and durable
- Virtually odor free
- VOC Free
- Ships non-hazardous

+PLUSeries®
BY FABTECH SYSTEMS
Made in the USA

The +PLUSeries system comes with everything you need, 220ml & 50ml cartridges, application tips and dispensing guns.

“Have to let you all know at FabTech what impact the 25 sec/60 sec +PLUSeries Adhesives have made to our practice. Retiring our gunks, acrylics and 2 part epoxy mixes has been a breath of fresh air. The old style gunks and acrylics rarely covered in one application, requiring 2 applications. No more wasted curing time and sanding in between applications. Gone are the 2 part epoxies that really never cured in the promoted time. It was always a coin toss as to when the working time was safe. +PLUSeries Adhesives are less costly up front - less waste, easier to apply and store well. Also important is the knowledgeable and helpful staff at FabTech. I very much appreciate your assistance in helping me help others.”

Many Thanks,
Greg Caldwell

New +PLUSeries Adhesives by Fabtech.

Faster. Stronger. Better.

+PLUSeries Adhesives by Fabtech. For people who don't have time to waste!

Engineered To Exceed Your Expectations.

Fabtech Systems +PLUSERIES® 25, 60, 90 second and Composite structural adhesives are a versatile and fast two-part urethane system used for bonding and repairing plastics, composites, aluminum, steel, plaster and nearly anything you can think of commonly used in the O&P manufacturing process.

Because it's a structural adhesive, it is incredibly stronger than brittle, fracture prone acrylics commonly used in our industry today. These urethanes are so strong you can even drill and tap them! We're confident you'll never want to use smelly toxic acrylics again.

New technology at your finger tips:

+PLUSERIES® Composite is a two-part black pigmented urethane adhesive designed for structural bonding of today's high performance composite sockets and bracing systems used in O&P. Combined at a 1:1 ratio like our other +PLUSeries® products, it has a working time of one minute and achieves full cure in 15 minutes at room temperature. As fast as our 60 Second products, our Composite adhesive requires little to no surface preparation while providing high strength and excellent fatigue endurance as well as superior toughness! Because of its black pigmentation, it's the perfect choice for use on carbon devices!

The +PLUSeries system comes with everything you need, 220ml & 50ml cartridges, application tips and dispensing guns.

Get More Than You Asked For.

Fabtech Systems +PLUSERIES® urethane adhesives are engineered to save professionals time and money while providing the best possible end result. Our +PLUSERIES® adhesives cut out 95% of process and working times commonly associated with current acrylic adhesives. Best of all, +PLUSERIES® adhesives have low to no odor and can be used anywhere in your facility.

Faster. Stronger. Better.

Commonly used acrylics, methyl-methacrylates, polyester and epoxies require time consuming preparation - such as gathering

needed materials, measuring additives and promoters. With +PLUSERIES® cartridge adhesives you simply add new dispensing tips, pick your product choice, 25, 60 or 90 seconds and you're ready to go. It's that easy!

A Higher Degree of Performance & Ease.

Are you tired of managing sticky, messy, smelly large cans of acrylic resin? So are we! Simply load a 50 or 220ml adhesive cartridge into the appropriate dispensing gun, twist off the cap, insert a static mixing tip and apply the adhesive where you need it with no dripping or running.
